Many thanks to Smart for his useful contribution to Multicategories. Now his great component JComments after a little modification can support Multicategories.

Actually the next version of JComments will have this support automatically, so any patches won't be needed. But if you want to get the comments for your Multicategories right now you may find the solution here <http://www.joomlatune.com/forum/index.php/topic,2241.0.html>
