Finally we made the first public beta of Multicategories Component for Joomla!2.5! Here is the Changelog for version 1.0.0b:

- articles multicategorization support added;
- system SEF support added;
- Category List layout added;
- Category Blog layout added.

All your comments and bugreports are welcome. You can place them in our [Multicategories Component for Joomla!2.5 Forum](#)

.

To download the component please go to [Multicategories Component for Joomla!2.5](#) project page.

Notice! Because of Joomla!2.5 has native support of multilevel categories we did not make separate table for Multicategories and corresponding admin view in backend. So now to add an article to several categories you should go directly to article and click Multicategories button under the editor. In the modal window there will be a list of your Joomla! categories which can be selected with Ctrl+Click.
