We have made some more changes to the Multicategories Component for Joomla!1.5. Here is the Changelog for version 1.0.6:

- search plugin added (this was discussed in our Forum);
- new commands (Copy and Move) in the Categories Toolbox added;
- logic for "Restore Data" and "Sync Backup" buttons in the Control Panel Toolbox changed (now they shows up only if Backup table is not identical to main Multicategories table);
- Italian language for front-end added (many thanks to Carmine);
- minor bugs fixed (Notice: Undefined property: stdClass::...).

Go to the Multicategories Component for Joomla!1.5 project page to download the last version.
