

Redirects Component for Joomla!1.5 Released!

Written by Mike Milkman

Sunday, 08 April 2012 00:00 - Last Updated Sunday, 08 April 2012 20:15

Here is our first release of the Redirects Component for Joomla!1.5. Redirects Component main features:

- redirecting bad requests without errors 4xx, 5xx that can make your site more attractive for search engines;
- logging bad requests to a database that can help you to know about hacking attempts against you site;
- converting non-SEF URLs to SEF;
- redirecting non error requests that let you implicitly close access to some sections of your site;
- fully automatic functioning that let your site after simple initial configuration manage bad requests without further manual work.

If you have any questions about our Multimenu Module you can post them on our [Other Products Support Forum](#)

Redirects Component is free to use and released under GNU/GPL. Go to the [Redirects Component for Joomla!1.5](#) project page to download the latest version of the extension.
