---

---

This is modification of the standard Joomla!1.5 Latest News module that displays the latest articles. The main difference from the original module is that this one uses Multicategories Component for Joomla!1.5 routing system to build the link to an article. So if you are using Multicategories on your site use this module instead of the standard one so the links to your Multicategories' articles displayed by the component and by the module will look the same.

### Multilatest Module main features:

- Multicategories Component for Joomla!1.5 support.
- 

### Multilatest Module Changelog Version 1.0.0:

- we did not plan anything special for this module just changed standard Joomla! article routing the way it utilizes Multicategories Component routing system to build an URL to the article.
-
